

Name: \_\_\_\_\_

# Covalent Compound Crossword

## Across

- 9. Bond where electrons are shared equally
- 10. Attractive forces when an atom is weakly bonded
- 11. Molecule with two regions and opposite charges
- 13. Forces from the attraction of oppositely charged polar molecules
- 14. Two or more equal electron dot structures

## Down

- 1. Valence shell electron pairs are repelled
- 2. Bond when electrons are shared unequally
- 3. The two weakest intermolecular attractions, dispersion and dipole forces
- 4. Attraction between molecules from motion
- 5. Molecule where a side is slightly positive and other negative
- 6. Bond angle forms when a single bond forms four bonds
- 7. A chemical bond involving the sharing of electrons between atoms
- 8. Formula showing kinds of atoms in a compound
- 12. A group of atoms joined together by covalent bonds
