

Dangers to the Fetus

Across

1. Doing this during pregnancy or after birth can cause low birth weight, learning disabilities, allergies, or SIDS.
6. This may cause placenta abruption, premature birth, miscarriage, and infant addiction.
8. The death of a baby after 20 weeks of gestation
9. This is generally safe in small amounts but may cause miscarriage, premature birth, low birth weight or infant death.
10. This condition can cause pre-eclampsia, stillbirth or premature birth. It goes away after delivery.

Down

2. Prescribed in the 50's to alleviate nausea, this was later found to cause limb deformities.
3. The death of a baby before 20 weeks of gestation
4. This may cause blindness, deafness, or mental retardation. The vaccine is also dangerous.
5. Consuming this during pregnancy can lead to facial deformity, mental retardation, learning difficulties, and trouble controlling behavior
7. This over-the-counter medicine used to relieve pain should be avoided during pregnancy.
