

Name: _____

Date: _____

Data Management Crossword

Across

3. Clusters of clusters
 7. Correlation is not causation, but this data can help find both
 12. Often used for marketing
 17. Four, five, six, or seven; the order says what number's chosen!
 20. Ask and you shall (probably) receive
 21. This type of data could tell you how many adjacent 'e's are in it's name, but only it's homonym could tell you how quietly you collected it
 22. It's a bird, it's a plane, it's superman!
 23. Your only data that wasn't fabricated by the Illuminati. (At least until you learn the lizard people control your mind as well)
 24. Only applicable for sampling people

Down

1. One, two, three, four; this data's numbers at its core!
 2. Just says how many
 4. How often do your students cheat on tests? Doing a poll to find out might not give accurate results for this reason
 5. Before you answer this brilliant question I have written, tell me in your own words, would you rate this masterpiece: A - The most brilliant question you have ever read; B - Such a brilliant question it's made you question all of your life choices; or C - A decent question that's ultimately had no impact on your life, likely because you're a bad person and you're also too stupid to see the beauty in my brilliant question.

6. I asked both my parents, and turns out 100% of Canadians agree that my brilliant question was brilliant
 8. Names chosen from a hat
 9. The kind of data you get doing a survey
 10. Only works once
 11. Seven, eight, nine, ten; get this data from a friend!
 13. Ten, eleven, twelve, thirteen; this data has what's in between!
 14. Could be as few as 2000 people if selected accurately
 15. It's not always about asking the shoppers at your local convenience store, but it could be
 16. How Akinator does his magic
 18. A Haskell type with no typeclasses
 19. Has all the minute details
