

Diastrophism

Across

4. applied when a rock is squeezed and forms mountains
 5. stress that stretches a rock in a divergent boundary
 9. mountain built by faulting
 12. hanging wall moves up
 13. A down fold in rocks

14. pushes a mass of rock in opposite directions transform boundary
 15. opposing forces causes rock to break and move horizontally in opposite directions

Down

1. magma inside earth is forced up to surface and breaks through crust
 2. fault you walk up

3. an upfold in the rocks
 6. fault you hang down off of
 7. rock breaks due to stress
 8. magma inside earth is forced up and can't escape forms this mountain
 10. down relative to the foot wall
 11. most common type of mountain
