

Disease By Hart Moseley

Across

3. A dead or weakened pathogen introduced to your body
6. The result of pathogens or germs invading the body, multiplying, and harming some of your body's cells
8. Primitive single or many celled organisms that cannot make their own food
9. Extremely small, single-celled organisms with no cell nucleus
10. Disease that can be spread

Down

1. A condition that affects the proper functioning of the body or mind.
2. A group of cells, tissues, and organs that fight disease
4. Microscopic organism that causes communicable diseases
5. You can spread the virus to others by direct or indirect contact
7. Chemicals produced specifically to fight a particular invading substance
