Do you know your Excel formulas?

Across

- 4. Searches for a value in the top row of a table or an array of values, and then returns a value in the same column from a row you specify in the table or array
- 5. Returns a custom result when a formula generates an error, and a standard result when no error is detected
- 6. This formula will return a value from an array corresponding to the index number provided.
- 8. Returns the count of cells that meet one or more criteria
- 10. joins information from different cells

Down

- 1. Multiplies ranges or arrays together and returns the sum of products
- 2. Returns a cell or range of cells that is a specified number of rows and columns from a cell or range of cells
- 3. Extracts a substring from a string (starting at any position)
- 7. Performs a logical test and returns one value for a TRUE result, and another for a FALSE result
- 9. Calculates the Net Present Value for a schedule of cash flows that is not necessarily periodic
