

ECMO October 2019

Across

- 3.** After connecting to the patient, you must place the patient on _____, to ventilate or you are not on ECMO.
- 4.** What is the acceptable temperature for the cooler?
- 7.** If you have a flat arterial line tracing, your patient could be in _____.
- 11.** For ECPR, going on with a clear circuit, try to get the _____ into the circuit before connecting to the patient.
- 12.** What blood product never goes in the cooler?

- 13.** FFP contains small levels of _____.

14. At what weight (kg) would you choose the 3/8" circuit?

Down

- 1.** _____ allows myocardial perfusion which is compromised with the LV does not eject.
- 2.** A portion of oxygenated blood that returns directly to the ECMO circuit without circulating to the patient first.
- 5.** _____ stands for Transfusion Associated Circulatory Overload.

6. What is the starting dose of Heparin infusion for patients greater than 1 month in units/kg/hr?

8. During normal physiology, myocardial perfusion occurs in _____.

9. We calibrate the Spectrum H&H using the patient's _____ from a sample sent to the lab only.

10. Caused when donor plasma antibodies react to the recipient's white cell antigens
