

Earth Science

Across

1. the center of the earth
3. a hill formed by the wind
5. a tall column rock
9. to keep from moving
12. a part of the earth's crust that was raised during plate collisions
15. the grinding down of one rock to another
17. an opening into the earth's crust where magma, ash and volcanic gasses escape
18. a noticeable characteristic or trait

19. the lowest part of a mountain

20. made smaller by squeezing

22. a deep ravine between cliffs often carved from the landscape by a river

Down

2. the highest part of a volcanic mountain

4. the side of a river

6. magma that flows onto the earth's surface

7. the bottom of a river

8. air that is in motion over the surface of the earth

10. hill-like piles of unsorted rocks and sediment dropped by a glacier

11. a low area of land between hills or mountains

13. the highest part of a mountain

14. volcanic ash that deposits on the ground

16. the outside layer of the earth's surface which is made of solid rock

21. melted rock inside the earth
