# Earth layers

## Across

- 3. a layer of molten (liquid) iron and nickel that surrounds the inner core of Earth
- 6. movement of material due to heat and density
- 7. layer of the mantle beneath the lithosphere
- 8. Creates cracks in the earth
- 9. Earth's crust and solid upper mantle

- 10. vibrations that travel through Earth carrying the energy released during an earthquake

## Down

- 1. The heat source inside Earth that causes the convection currents.
- 2. when lava erupt its called
- 4. the amount of matter in a given volume,
- 5. a dense sphere of solid iron and nickel at the center of Earth
