

# Earth's Early History

## Across

4. the idea that the physical, chemical and biological laws that operate now operated in the past
5. method that geologists use to place rocks in chronological order
7. Dying out
9. Change over time
10. Pieces of one rock unit that are contained within another rock unit

## Down

1. Beneficial traits for surviving
2. the process by which atoms decay
3. Preserved remains or traces of an organism
6. the largest intervals of geologic time
8. periods are divided into these smaller units
