

Name: _____

Date: _____

Earth's Structure

Across

- 3. part of Earth that contains water in oceans rivers, etc.
- 4. layer of molten metal surrounding the inner core
- 7. normally light colored rock that is coarse-grained
- 9. transfer of thermal energy by the movement of a fluid
- 12. force pushing on a surface
- 13. softish layer of the mantle below the lithosphere
- 15. part of Earth that contains all life

16. forces that build up Earth's surface

19. group of parts that work together as a whole

20. uppermost layer of the mantle

Down

1. dark and fine-grained rock

2. forces that tear down Earth's surface

5. vibrations produced by Earthquakes

6. thin layer of gases that make up the outermost layer of Earth

8. ability to do work

10. densest part of Earth that includes the crust, mantle and cores

11. layer of rock that forms Earth's surface

14. layer of hot and solid material in between the crust and cores

17. dense ball of solid metal

18. transfer of energy by electromagnetic waves
