

# Earth's Structure and Plate Tectonics

**Across**

- 2. Idea that Earth's continents move
- 6. Two plates move from each other
- 7. Land formation formed by continental plate divergence
- 12. Less dense material that make up continental crust
- 13. The outer part of the core
- 14. The part of the core closest to the center of the Earth
- 16. The rigid part of the Earth

- 17. The part of the Mantle closest to the outer core
- 19. The part of the mantle that is closest to the lithosphere
- 20. The middle of the mantle

**Down**

- 1. The part of the crust you live on
- 3. The supercontinent
- 4. Discovered sea floor spreading
- 5. Two plates collide
- 8. Two plates slide against each other

- 9. Below the continental crust
- 10. Proposed the continental drift theory
- 11. Area in the Pacific Ocean where lots of earthquakes happen
- 15. The upper part of the Mantle
- 18. Dense material that make up ocean crust
