Date: _____

Ecology Vocab

Across

- 2. Succession where ecosystems change and develop over time.
 - 6. Species not native to the ecosystem and causes harm.
 - 10. Able to thrive in a narrower range of environmental conditions.
 - 11. Species that is the first to thrive in a previously damaged ecosystem.
 - 13. Non-directional response to a stimulus.
 - 16. Behavior of an organism that benefits another at its own expense.

17. One organism benefits, the other is not harmed nor benefitted.

Down

 1. Resemblance of an organism to another or an object for concealment and protection.
 3. Richness in water that causes growth of plant life and death of animal life.
 4. Motion in response to external stimulus.
 5. Species in which other species largely depend on.
 7. Able to thrive in a wide variety of ecosystems.

8. Possess unstable population in which there's high growth rates but small survival rate.
 9. Organism decreases or ceases response to a stimulus after repeated presentations.
 12. Science of animal behavior.
 14. Succession where regions in which the soil can not sustain life due to factors like lava flows.
 15. Possess stable population with a low number of offspring.
 18. Succession in response to a disturbance like a forest fire.
