

Ecosystem Interactions

Across

- 6. when some individuals survive because of the variations in their DNA
- 8. the first species to live in an area
- 9. changes in the DNA of an organism
- 10. when a species changes over time due to different variations making one variation more likely to reproduce
- 11. gradual change in an ecosystem that has previously supported life

Down

- 1. a frame of known size that scientists use to survey an area
- 2. gradual change in an ecosystem that has not previously supported life
- 3. any organism that is accidentally or intentionally brought into an area it is not known to exist in
- 4. any organism that is common to a given area
- 5. any organism that is detrimental to an ecosystem it is not known to exist in
- 7. differences between individuals of a species
