

Elbow Vocabulary

Across

- 2. Small, usually hard lump above a tendon or in the capsule that encloses a joint
- 6. Injury or disability caused when the normal position of joint or their part of the body is disturbed
- 8. Decrease blood supply to an organ or tissue resulting from pressure, swelling, trauma, or a fracture
- 10. A chronic strain of the medial or lateral epicondyle in the elbow

Down

- 1. A depression on the side/back of the hand, just beneath the thumb, that is formed by two tendons

- 3. Inflammation of a tendon, most commonly from overuse but also from infection or rheumatic diseases
- 4. A muscle injury caused by the twisting or pulling of a muscle or tendon
- 5. An injury resulting from a direct blow or force that does not interrupt the skin; typically bruising is seen at the injury site
- 7. Significant structural displacement
- 9. An injury resulting from a fall, sudden twist, or blow to the body that forces a joint out of its normal position
