Electricity

Across

- **3.** This does not allow electricity to flow through it
- **5.** What charge does an electron have
- 8. Light emitting diode
- **9.** An example of a conductor
- **12.** Slows down the current in a circuit

- **13.** This is known as a flow of charge
- **14.** When diodes are connected to allow current to flow
- **15.** Something that allows electricity to flow through it

Down

1. This is a build up of charge

- **2.** Electronic component that ensures the current flows one way
- **4.** A type of resistor that depends on light
- 6. Measures current
- **7.** An example of a insulator
- 10. Units for resistance
- **11.** Components attached in a circuit side by side
