# Endocrine System Diseases and Disorders 1

## Across

5. An abnormal enlargement of the thyroid gland.
7. Long term use can result in shrinking of the testicles and the growth of breast tissue in men. They are anabolic and increase protein within cells.
8. A genetic disorder that makes XY fetuses unresponsive to androgens (male hormones). They are born looking externally like girls.
9. An abnormally high concentration of parathyroid hormone in the blood, resulting in weakening of the bones through loss of calcium.
10. A condition in which the body creates too much of the hormone cortisol.

## Down

1. A rare familial disorder that occurs in women. The adrenal glands develop abnormally and produce excess androgens which results in hormonal problems.
2. An autoimmune disease that affects the thyroid.
3. Deficiency of glucose in the bloodstream.
4. Medical condition in which too much aldosterone is produced by the adrenal glands, which can lead to lowered levels of potassium in the blood.
6. An excess of glucose in the bloodstream, often associated with diabetes mellitus.
