

Evolution---Learning Menu

Across

4. Technique used to determine which of two fossils are older.
 6. Process embryo forms and develops.
 9. The shared ancestor of different species.
 10. Genetic similarities.
 12. How organisms evolved over time.

13. Rock formed in layers.

14. Time order events are arranged in.

Down

1. Chronological order of life's remains in rock layers.
 2. Diagram that shows the evolutionary relationships among groups of organisms.

3. The state of being diverse.

5. Measurements of radioactive material an object contains.

7. The study of body structure.

8. A species with no longer living organisms.

11. Preserved remains of once living organisms.
