# Evolution

## Across

6. Competition for mate

8. Theory of evolution developed by Darwin

10. Biological evolution

13. The stock of different genes in interbreeding populations

14. Microevolution

15. Organisms independently evolve

## Down

1. Influence of close associates on species

2. Sudden periods of time

3. Theory that evolves in steps over time

4. Random change in alleles

5. Diversification of species in numbers

7. Alleles stay the same unless affected

9. Measure of a trait's relative contribution

11. The disappearance of a species

12. Change taxonomic group
