

Evolution

Across

- 1.** 5 pieces of this for evolution
- 4.** Evolutionary changes occur over a long period of time
- 9.** Due to this the proportion of different alleles will change across generations
- 11.** Occurs when phenotypes at one extreme of a traits range are favored
- 13.** The rise of two or more species from one existing species is called

- 14.** The process by which different kinds of living organisms are thought to have developed and diversified from earlier forms during the history of Earth

- 15.** Identification by humans of desirable traits and steps taken to bring out those traits

Down

- 2.** The action or process of adapting or being adapted
- 3.** Increases the genetic variation of the receiving population

- 5.** A change in the allele frequencies due to chance or random events
- 6.** Occurs when both extreme phenotypes are favored
- 7.** Occurs when an average phenotype is favored and becomes more common in a population
- 8.** Developed the theory of evolution
- 10.** The elimination of a species from Earth is called
- 12.** The combined alleles of all the individuals in a population
