

Evolutionary Theory Crossword

Across

4. A type of geography that heavily involves the geographical distribution of plants and animals.

6. The formation of new species suddenly in the course of evolution.

10. A process in which organisms that are better adapted to their environment will live and continue to breed, whereas organisms that struggle die off and don't breed.

11. A change that helps an organism become better adapted for its environment.

12. Major evolutionary change.

Down

1. When different animals share similar organs or bones; This shows they may have a similar ancestor.

2. The breeding of plants/animals by humans to produce desirable traits.

3. Different species having the same function but not evolving from a common ancestor.

5. Evolutionary change in a species/group of organisms, typically over a short period of time.

7. The process of species diversifying and progressing, occasionally into new species/breeds.

8. A system/series of ideas that explains a phenomenon/action.

9. The remains of a prehistoric organism preserved in a "mold" of rock (or amber).
