

Name: _____

Date: _____

Exam Review Earth

Across

3. The removal of weathered material from one place to another
 5. A process that builds up land forms on Earth
 7. The laying down or settling of eroded material
 11. Dripping groundwater that forms long spires from the ceiling in caves
 13. Small grains are deposited where environments have _____ energy
 14. A pile of windblown sand
 16. A long low ridge of soil that prevents flooding on a flat area near a river
 17. Another word for retaining walls on beaches
 18. Water, wind and ice are these

19. Mixture of various sized sediment deposited by a glacier
 22. Downhill movement of a large mass of rocks and soil because of gravity
 23. A large deposit of sediment that forms that forms where a stream enters a large body of water

Down

1. The grinding away of rock or other surfaces by wind, water or ice scraping
 2. A current that flows parallel to the shore
 4. A type of weathering that changes the chemical composition of the rock
 6. A process that tears down features on Earth's surface
 8. Large mass of ice that formed on land and moves slowly across Earth's surface

9. Where a stream slows it creates broad, C-shaped curves called:
 10. Where a stream flows from a steep narrow canyon into a flat plain (2 words)
 12. A crumbly deposit of windblown silt and clay
 15. Weathering occurs _____ on barren land than one with vegetation
 20. A pile of angular rocks and sediment from a rockfall
 21. Erosion is more destructive when mass wasting occurs on _____ hillsides
