

Name: _____

Date: _____

Exothermic and Endothermic Reactions

Across

3. What are burning candles and fireworks an example of?

8. Which reaction causes the temperature of the surroundings to decrease

10. Different kinds of atoms not chemically bonded

11. During an exothermic change heat energy is

12. Exothermic reaction between aluminium and iron oxide

Down

1. Different types of atoms chemically bonded

2. An example of an endothermic reaction

4. Substances that react together in a chemical reaction

5. During an endothermic reaction energy is

6. Which reaction causes the temperature of the surroundings to increase

7. Atoms which are all the same (e.g. Oxygen)

9. Substances that are formed in a chemical reaction
