

Name: _____

Date: _____

Extinction and Natural Selection

Across

2. This animal evolved long legs to run fast and a long neck to graze grassland
4. In 1859 Darwin set sail on the survey ship called?
5. Selection in action can be seen in these 'super' organisms!
7. Less well adapted organisms may disappear forever.

9. The group of islands off the coast of South America visited by Darwin

10. These organisms helped Darwin to develop his theory

11. These provide evidence for the process of evolution

12. The gradual change in the features or characteristics of a species

13. This explains why not all plants and animals survive

Down

1. These bacteria are not killed by antibiotics

3. He proposed the idea of Natural Selection

6. These organisms are responsible for the extinction of thousands of organisms.

8. This organism once lived on the island of Mauritius
