

Factors of Development & Genetics

Across

- 1. deoxyribonucleic acid, a self-replicating material.
- 6. a person's mental or physical condition.
- 8. the study of heredity and the variation of inherited characteristics.
- 9. the process of increasing in physical size.
- 10. the process of developing or being developed.

Down

- 2. a pair of parallel helices intertwined about a common axis, especially that in the structure of the DNA molecule. DOUBLE

- 3. a unit of heredity that is transferred from a parent to offspring and is held to determine some characteristic of the offspring.

- 4. a threadlike structure of nucleic acids and protein found in the nucleus of most living cells, carrying genetic information in the form of genes.

- 5. a condition of body and mind such as that which typically recurs for several hours every night.

- 7. the process of providing or obtaining the food necessary for health and growth.
