

Final Exam Review - Vocabulary

Across

1. A solid figure that has a vertex opposite a single base.
3. The distance around a polygon.
6. A region within a circle that is bounded by two radii and their intercepted arc.
7. A solid figure that has a pair of parallel bases.
11. A three dimensional shape.
12. The average of a data set.

13. The point that is equidistant from every point on a circle.

14. The area of the exterior of a solid, without including the bases.

17. The distance around a circle.

18. The space enclosed by a circle or polygon.

Down

2. An angle with its vertex at the center of a circle and its ends on the circle.

4. An angle with its vertex and ends on a circle.

5. A part of the circumference of a circle.

8. The middle data value for a data set.

9. The most frequent data value.

10. The area of the exterior of a solid.

15. The space contained by a solid.

16. The difference between the greatest and least values of a data set.
