

Floriculture

Across

3. The impression of the design being stable and self-supported

7. A citric acid solution that causes flowers to take up water rapidly to prevent hydration after flowers being dry packed

9. The relationship between the completed arrangement and its location

10. A design technique in which branches of flowers are used around the perimeter of a floral arrangement to direct attention to the materials in the center of the arrangement

11. Floral Material that has an "airy" look to create the finishing touch

12. Red, Yellow, Blue

Down

1. The relationship between the flowers, foliage and container

2. Firmly wrapping or tying similar materials together to form a larger, individual unit

4. Two primary colors combined in equal amounts

5. The length of useful life of cut floral materials after being received by the customer

6. The location within a design that attracts the most attention

8. The storage or shipment of flowers out of water
