# Food Webs and Energy Pyramids

## Across

7. a \_\_\_\_\_ consumer eats producers.
8. organisms at the base of all food chains and webs that make their own food
9. Multiple food chains linked together
10. the process that producers use to create their own food from the energy of the sun

## Down

1. a tool that tells us about the energy and number of organisms in a trophic level

2. organisms that cannot make their own food so they must consume other living things as food

3. a \_\_\_\_\_ consumer eats secondary consumers

4. a \_\_\_\_\_ consumer eats primary consumers

5. position or level an organism occupies (eats) in a food chain or web

6. earthworms, fungi and bacteria are all examples of \_\_\_\_\_.

11. only \_\_\_\_\_% of energy is transferred from one trophic level to the next
