# GEOMETRY WORLD

## Across

2. a four-sided polygon with two pairs of parallel sides  
 3. polygon with four sides (and four angles)  
 12. a two dimensional shape  
 13. a polygon with five sides  
 15. part of a line with two end points  
 17. the unit of measurement for angles  
 18. angle more than 90 degrees and less than 180 degrees

19. angles that have the same measurement in degrees (equal)  
 20. angle less than 90 degrees  
 21. pairs of angles on opposite sides of the transversal but inside the two lines  
 22. an angle that is exactly 90 degrees

## Down

1. angle in matching corners  
 4. a polygon with eight sides  
 5. angle that is exactly 180 degrees

6. pairs of angles on opposite sides of the transversal but outside the two line  
 7. a polygon with three sides  
 8. two angles which measure adds up to 180 degrees  
 9. two angles which measure adds up to 90 degrees  
 10. distance around the figure  
 11. angles are "side by side" and share a common ray  
 14. angles that are opposite one another (congruent)  
 16. angle that is more than 180 degrees
