

Geology Review

Across

- 2. two tectonic plates pushed together
- 4. When the earth's crust opens and erupts lava
- 5. Two plates move away from each other
- 9. Melted rock erupting from a Volcano
- 13. Molten rock under Earth's Surface
- 14. a mineral that smells of rotten eggs
- 15. Made of Iron and Nickel

17. Breaks along a flat surface

- 19. rocks that are inorganic, solid, and fixed chemical composition
- 20. Small volcanoes made from ash and rocks

Down

- 1. explosive eruptions followed by outpourings of lava
- 3. Shaking of the ground by a fault line
- 6. to break unevenly

- 7. two tectonic plates that go past each other
- 8. Elevation between different places
- 10. the science of physical features and structure
- 11. Ice that doesn't melt in a fast period of time
- 12. the mineral known as fool's gold
- 16. contains most of Earth's crust
- 18. type of volcano that is almost entirely magma and lava
