# Geometric Relationships

## Across

2. Angle that measure is 180.  
 4. Triangle that has at least 2 congruent sides and 2 congruent angles.  
 10. Triangle that has 1 obtuse angle.  
 12. Two angles whose measures add to 90.  
 14. Is a way of matching up two sets of objects.  
 17. Lines that intersect at 90 degree angles.  
 19. is a change in a figure position or size.

21. Nonadjacent angles formed by two intersecting lines.

22. Triangle with 3 congruent sides and 3 congruent angles

## Down

1. Lines in a plane that never meet  
 3. Triangle with 3 acute angles.  
 5. Two angles whose measures add to 180.  
 6. Greater than 0 and less than 90  
 7. Segment is the point that divides the segment into two congruent segments.

8. Angles that have the same measure.

9. Greater than 90 and less than 180.

11. Angles that have a common vertex and a common side.

13. Triangle with one right angle

15. Triangle that has no congruent sides and no congruent angles.

16. Line that intersects two or more lines that lie in the same plane.

18. Angle of 90 degrees

20. Formed by two rays
