

Name: _____

Date: _____

Geometric Terms

Across

- 4. Means equal
- 5. An angle that is greater than 90 degrees
- 8. A location in space
- 13. A set of lines that go in four directions infinitely
- 14. line that intersects a circle at one point
- 17. A polygon with four sides
- 19. A quadrilateral that all the sides have the same length and the interior angles are all right angles

- 20. An angle that is less than 90 degrees

Down

- 1. A line segment with the endpoint on the circle
- 2. A set of points in both directions infinitely with no width or length
- 3. Lines that form right angles where they intersect
- 6. A quadrilateral with two sets of parallel side, opposite angles are congruent, diagonals bisect each other

- 7. An angle that is exactly 90 degrees

- 9. A polygon of three sides
- 10. A polygon with five sides
- 11. A chord that goes through the center of the circle
- 12. Formed by two rays from a common point
- 15. Two lines that never intersect
- 16. A line in a direction infinitely from a specific point
- 18. A line segment from the radius to a point on the circle
