$\qquad$

## Geometry

## Across

3. Point of concurrency in a triangle
4. The point in the middle of a line
5. The point of the triangle where the distance to each side is equal
6. Angle smaller than 90 degrees
7. A figure that goes on forever $\&$ is not defined
8. 2 Shapes having equal angles and corresponding sides
9. A quadrilateral whose angles all equal 90 degrees and sides are all the same length
10. The line that passes through 2 or more parallel lines
11. Reversing "if" and "then" in a statement
12. The measure of a surrounding area
Down
13. Angle equal to 90 degrees
14. A statement that can be proven
15. Statements that don't need proof \& are accepted as true
16. A quadralateral with 4 equal sides, 2 obtuse angles $\& 2$ acute angles
17. A quadralateral whose sides can be grouped to 2 equal pairs
18. A line that goes on in 1 direction
19. When ~ if means ~ then
20. Space taken up by a figure
21. Formed by 2 lines $\&$ found at the vertex
22. A location
