

Geometry

Across

1. A triangle that has all congruent sides

2. $a+b=c$ squared

8. When you add all of the side lengths together

10. Angles that have a sum of 180 degrees

12. An angle that has is 90 degrees

13. Equal (have the same length)

14. A triangle that has no congruent sides

15. A triangle that only has two congruent sides

Down

3. An angle measure that is greater than 90 degrees

4. A shape that contains 4 sides

5. When you multiply the length and the width

6. Rectangle

7. when there is a set length eith a starting point and an ending point

9. There is a starting point but no ending point

11. Square
