Geometry

Across

1. Angle that measures 180 degrees.
4. Angle that measures less than 90 degrees.
8. Made up of points.
9. Two segments having the same measurement.
10. There is exactly one throughout any three non collinear points.
11. A location, nondimensional.
13. Points that lie on the same plane.

16. Two angles that lie in the same plane, have a common vertex and a common side but no common interior points.

17. Made up of two non collinear rays.
19. A pair of adjacent angles who non common sides are opposite rays.
20. Common endpoint of an angle.

Down

2. Two angles whose sum is 180 degrees and forms a straight line.

3. Terms such as point, line and plane that are explained in examples.

5. Not in a straight line.
6. A ray that divides an angle into 2 congruent angles.
7. Two non adjacent angles formed by 2 intersecting lines.
12. Angle that measures more than 90 degrees.
14. Angle that measures 90 degrees.
15. Part of a line with an endpoint.
18. Each angle has two.
