# Geometry Crossword Puzzle

## Across

1. statements that we prove using logic
4. type of triangle that has at least two equal sides
6. type of angle that is less than 90 degrees
9. set of points that the figures have in common
10. set of all points in three dimensions
11. part of a line
13. two rays that share the same endpoint and form a line

14. two angles whose measures have a sum of 180 degrees
17. a special name given to a theorem that is easy to prove as a direct result of another previously proved theorem
19. when three or more lines intersect at one point
20. two angles whose measures have a sum of 90 degrees

## Down

2. statements that we accept as true and do not try to prove
3. type of angle that is more than 90 degrees

5. distance around a circle
7. formed by three non-collinear points connected by segments
8. distance around a figure
12. two adjacent angles if non-common sides are opposite rays
15. type of angle that is 90 degrees
16. extends in two dimensions without end
18. number of squared units it encloses
