Geometry Fun Times

1. Which word describes something that has two endpoints?   A. Mr. Jones

2. I go on forever and ever in two directions   B. y=-2x-7

3. I am made up of two rays that point in opposite directions   C. collinear

4. I have no dimension. I look like a dot.   D. y=2x-7

5. I am super flat. I go on and on forever in ALL directions. Think of me like a sheet   E. line
of paper that's infinitely big. (I dont require a pilot hint. hint.)

6. I am multiple points that are all on the same line.   F. coplanar

7. I am six feet, four inches tall. I care more about you than you will probably ever   G. line segment
know. I would give my left limb up if it meant you got a better life.

8. I represent a few points that are all on the same plane   H. a plane

9. I am a line. This point is on me: (3,-1)   I. a point

10. I am a line. this point is on me: (3,-13)   J. opposite rays
