

Name: _____ Date: _____

Geometry Terminology Crossword by Emma Ward

Across

- 4. a dot that does not actually have any size
- 5. the point that is in the exact middle
- 6. an angle that measures less than 90 degrees
- 7. two angles that together form a line
- 8. two angles opposite across the vertex
- 10. an angle that is greater than 90 degrees and less than 180 degrees
- 13. a point that lies between two endpoints
- 16. a line with endpoints on each side
- 19. on the same plane
- 20. a flat figure that has to be closed with sides
- 21. two lines that will never cross
- 23. two angles that add together to equal 180 degrees

- 26. points that lie on the same line

- 27. the zero value of a protractor

- 28. the name for the shared endpoint of an angle

- 29. a point, line, or plane that divides into two equal parts

- 30. two intersecting lines that create four 90 degree angles

- 32. a grid used to plot points

Down

- 1. a ray that divides an angle into two equal parts

- 2. two angles that share a ray, or common side

- 3. two angles that add together to equal 90 degrees

- 9. two lines that cross

- 11. a point, line, or plane cuts a segment into equal parts

- 12. points that do not lie in the same line

- 14. the figure with two rays with the same endpoint

- 15. an angle that measures 90 degrees

- 17. points that stop a line from continuing on

- 18. the unit of measure for an angle

- 22. a line with one endpoint and one arrowhead

- 24. tool used to measure angles

- 25. to have the same measure

- 31. a line with arrowheads on each side
