Geometry Terms Quiz

- | | |
|---------------------------------------------------------------------------------------|-----------------------|
| 1. An angle that measures less than 90 degrees | A. four sided polygon |
| 2. An angle who has a measurement of more than 90 degrees | B. straight angle |
| 3. An angle who measurement is 180 degrees | C. right angle |
| 4. triangle with two congruent sides | D. scalene triangle |
| 5. A triangle with one obtues triangle | E. acute angle |
| 6. an angle with a 90 degree measurement | F. obtuse angle |
| 7. a triangle with no equal side lengths | G. hexagon |
| 8. has one endpoint and goes on in one direction. | H. ray |
| 9. a six sided polygon | I. circumference |
| 10. quadrilateral | J. polygon |
| 11. a two dimensional shape with straight line segments that connect | K. radius |
| 12. a line segment that passes through a circlces center with endpoints on the circle | L. obtuse triangle |
| 13. half the measurement of a diameter | M. perimeter |
| 14. the distance around a circle | N. diameter |
| 15. the distance around a polygon | O. isosceles triangle |
