

Name: _____

Date: _____

Geometry Vocab Crossword Puzzle

Across

2. a part of a line that consists of two endpoints and all points between

3. to draw around is the circle that passes through all three vertices

4. the middle point of a segment

11. a line that divides a line segment into two equal parts

14. a set of objects if the distances between that point, and each object in the set are equal

15. highest point, the common endpoint of two or more rays or line segment

16. point of concurrency of the triangle

18. a line or ray that divides an angle into two congruent angles

19. a line meeting another at a right angle

20. The line connecting the midpoint of two sides of a triangle

Down

1. where three or more lines intersect in one place

5. a straight path that has zero thickness and extends

6. names a location and has no size

7. point where all three angle bisector always intersects

8. segment joining a vertex to the midpoint of the opposite side

9. the point at which the perpendicular bisector of the sides of a triangle intersect and which is equidistant from the three vertices

10. A line which passes through a vertex of a triangle and meets the opposite side at right angles

12. it is flat surfaced that extends forever

13. point where the three "altitudes" of a triangle meet

17. an angle formed two chords in a circle which have a common endpoint
