$\qquad$
$\qquad$

## Geometry Vocabulary

## Across

4. Two angles whose measures have a sum of 180 are $\qquad$ .
5. Lines in the same plane that do not intersect are
$\qquad$
6. $A(n)$ $\qquad$ is the common endpoint formed by two rays.
7. A(n) $\qquad$ is an angle that measures exactly 180.
8. $A(n)$ $\qquad$ is a
straight path that has no thickness and extends forever in opposite directions.
9. $A(n)$ $\qquad$ is an exact location on the coordinate plane.
10. A(n) $\qquad$ is formed by two rays with a common endpoint.

## Down

1. An angle that measures greater than 90 is called
2. If the angles formed by two intersecting lines are 90, the the lines are $\qquad$ _.
3. A line that intersects two or more lines that lie in the same plane is called a
$\overline{5 . A(n)}$ is part of a line that has one endpoint and extends forever in one direction.
4. Figures are $\qquad$ if they have the same shape and size.
5. $\qquad$ angles are opposite angles formed by two intersecting lines.
