

Geometry Word Puzzle

Across

1. A line that intersects two or more points on a curve.

8. A position in space.

11. A triangle having three unequal sides and angles

13. an angle formed by two chords in a circle which have a common endpoint

15. Line segments that do not intersect

16. A polygon with 5 sides and 5 angles.

17. three-dimensional shape which consists of two identical polygons

18. A straight line passing through the center of a circle.

19. arc of a circle having measure less than or equal to.

20. One part of a line

Down

2. A polygon having eight angles and eight sides

3. A 90 degree angle.

4. A polygon having six sides and six angles.

5. arc of a circle having measure greater than or equal to radians.

6. a round plane figure whose circumference consists of points equidistant from the center.

7. A rectangle having all four sides of equal length

9. Two or more circles which have the same center point

10. Has 3 sides

12. a straight line segment whose endpoints both lie on the circle.

14. A line that just touches a curve at one point, without cutting across it.
