

Name: _____ Date: _____ Period: _____

Geometry Word Search

Across

- 1. A ray that divides an angle into two congruent angles
- 3. Points that lie on the same plane
- 8. Any measurement depends on the smallest unit available for the measuring tool
- 12. Point determines exactly two rays
- 13. They are only explained using examples and descriptions
- 15. Points that lie on the same plane

Down

- 2. Any segment, line, or plane that intersects a segment at its midpoint
- 4. Made up of points and has no thickness or width
- 5. A simply location
- 6. A segment is the point on the segment that divides the segment into two congruent segments
- 7. Is a boundless, three-dimensional set of all points
- 18. The common endpoint

Across

- 9. A flat surface made up of points
- 10. When segments have the same measure
- 11. Segment, can be measured because it has two endpoints
- 14. Is formed by two noncollinear rays that have a common endpoint
- 16. A set of points that satisfy a particular condition
- 17. Is part of a line
