

Name: _____ Date: _____ Period: _____

Geometry

Across

4. an angle formed outside parallel lines by a third line that intersects them

8. points that lie on the same line

11. angle that is 90 degrees

12. a location named by a capital letter

13. the intersection of two noncollinear rays at a common endpoint

14. angle that is 180 degrees

16. a collection of points along a straight path that goes on and on, has no endpoints.

18. a ray that divides an angle into two congruent angles

20. lines that form right angles

Down

1. two angles with measures that have a sum of 180 degrees

2. having the same measure

3. two nonadjacent angles formed by two intersecting lines

5. an angle formed within a polygon by two adjacent sides

6. two angles with a measure that have a sum of 90 degrees

7. the point halfway between the end points of a segment

9. an angle that is less than 90 degrees

10. an angle that is more than 90 degrees

15. lines bounding a geometric figure

17. a pair of adjacent angles whose non common sides are opposite rays

19. points that lie in the same plane
