Geometry (i made this with https://wordmint.com/puzzles/3581370)

## **Across**

- **3.** a triangle having three unequal sides and aangles
- 7. a parallelogram having four right angles
- 8. an equilateral
- parallelogram having oblique angles
- **10.** a polygon with 5 sides and 5 angles
- 11. a shape having all four sides of equal lengths
- **14.** the coolest guy ever
- **15.** a continuous extent of length

- **17.** the line segment which cross to form 90 degree angles
- **19.** a position in space
- **20.** line segments that do not intersect
- **21.** one part of a line **Down**
- 1. a polygon having six sides and six angles
- **2.** line segment that cross each other
- **4.** a polygon having eight sides and eight angles
- 5. A 90 degree angle

- **6.** a triangle with all sides equal and all angles equal
- **9.** a triangle which has two sides qual
- **12.** the intersection point of two sides of a plane figure
- **13.** an angle less than 90 degrees but greater than 0 degrees
- **16.** the line segment between two points on a given curve
- **18.** a triangle with one internal angle equal to 90 degrees
