

Name: _____

Date: _____

Glaciers

Across

6. Fragments of rock get pried loose and made part of the glacier
 7. Area where mass is gained
 8. Boulders embedded in till
 10. Alpine glacier empties into ocean & leaves behind a deep narrow bay-like structure

11. Area where mass is lost

Down

1. Summer melting & sublimation
 2. Ice deforms within and moves like a fluid
 3. Ice does not do this, the material that is being carried does
 4. Light puffy snow

5. Water seeps down and refreezes to lock crystals together

9. Material deposited directly by ice

12. Crystal edges become rounded because of melting
