

Name: _____

Glaciers and stuff

Across

3. A valley which has been cut across by a deeper valley

4. A mountain lake in a corrie

6. The name given to a valley after glaciation

7. A process of erosion where ice sticks to the valley sides and pulls rocks away as it moves

10. A ridge that has been cut across by a valley

12. A stream occupying a valley which is larger than would be predicted on the basis of the stream's present erosive power

Down

1. The name given to water freezing in rocks and breaking them apart

2. A good example of a pyramidal peak

5. A hollow on a mountain that was originally natural but has been deepened and widened

8. The Welsh name for a corrie or cirque

9. A process of erosion where the glacier, with rocks underneath, acts as sandpaper on the land's surface

11. A knife-edge in between two corries
