

Glucocorticoid Release and Memory Consolidation

Across

- 2. The primary finding of this experiment is that there exists a _____ relation between cortisol release and memory consolidation.
- 4. Processes that contribute to long term stability of memories after initial acquisition.
- 7. A stress response is the body's way of reestablishing _____.
- 9. _____ memories are generally better remembered than unemotional ones.
- 10. Males recall was significantly _____ in the CPS group than the control group.

Down

- 1. Hormone that enhances memory consolidation when applied at low doses post training, but ineffective or impairs memory at high doses.
- 3. Describes something produced, originating or growing from within _____.
- 5. Salivary cortisol levels were significantly _____ by CPS versus controlled condition in warm water.
- 6. Any stimulus, real or perceived, that disrupts homeostasis.
- 8. Following a memory-encoding event, glucocorticoid hormone levels can _____ consolidation processes in both animals and humans.
