# Graphing Linear Equations and Functions Unit

## Across

- 1. two lines in the same plane that intersect to form a right angle
- 7. the slope,  $m$ , is the ratio of rise/run
- 9. the function  $f(x) = x$ , which is the most basic function in the family of linear functions
- 10. the x-coordinate of a point where a graph crosses the x-axis
- 11. a way to name a function using the symbol  $f(x)$  instead of  $y$

## Down

- 2. a group of functions with similar characteristics
- 3. two lines in the same plane that do not intersect
- 4. a linear equation written in the form  $y = mx + b$ , where  $m$  is the slope and  $b$  is the y-intercept of the equation's graph
- 5. an equation whose graph is a line
- 6. the y-coordinate of a point where a graph crosses the y-axis
- 8. the four regions into which the coordinate plane is divided by the x-axis and y-axis.
