

# HMA Review

## Across

3. increase cardiac contractility by inhibiting membrane sodium-potassium ATP-ase  
 5. imaging technique that uses x-rays and injected dyes  
 9. big, fat, exogenous lipoprotein  
 12. the QRS complex corresponds to the \_\_\_\_ of the heart ventricles  
 13. endovascular procedure used to increase blood flow through narrowed/obstructed blood vessels  
 14. muscular contractile strength  
 15. blood clot formation  
 16. tissue death

17. \_\_\_\_ inhibitors prevent cAMP breakdown and can be used to treat acute heart failure  
 18. \_\_\_\_ vein, drains into axillary vein, arises from radial side of dorsal venous network of hand  
 20. the work the heart does in pumping blood/the pressure the ventricle must work against during systole

## Down

1. elevated blood cholesterol levels  
 2. all L-type calcium channel blockers \_\_\_\_ arterial smooth muscle

4. common sites of venipuncture  
 6. the narrowing of artery walls  
 7. \_\_\_\_'s Law of the Heart  
 8. stimulates vasoconstriction and aldosterone secretion  
 10. the lingual artery passes under the \_\_\_\_  
 11. the pulse that is palpated between sternocleidomastoid muscle and trachea/laryngeal cartilages  
 19. \_\_\_\_ inhibitors inhibit conversion of Angiotensin 1 to Angiotensin 2
